

Dynamic Regrouping- Instantly Telling the Patient's Story from "the doctor's perspective"

- ∞ Skip time consuming searching through a patient's chart and immediately go right to the view your specialty wants to see.
- ∞ Your patient contact right at the top.
- ∞ Covered by two U.S. patents (U.S. Patent No. 10,437,844 and 11,334,584).
- ∞ Implemented in Billings Clinic version of Cerner.
- ∞ "A time-saving view for every specialty", money saving for every hospital.
- ∞ Avoids errors of omission.
- ∞ Avoids having to know by whom, for what, and when the patient was seen previously.
- ∞ Can apply to documentation, labs, problems, orders or any other preference.
- ∞ Not only for physicians and providers but helps nursing and schedulers.

Current State of Electronic Health Record Software

Delivery of medical care comes at the provider fast. In the electronic record you must know where to go to look or you will never find what you are looking for ...

The software needs to work at the speed of medicine!

Traditional approaches require you have foreknowledge of details which neither you or the patient may have or recall.

Trade-off
Slow vs.
Incomplete

My Notes, Reverse Chronological Order

Any other provider documents from my department

Other specialists I would reference.

Of Course, a surgeon would want to see procedure consents...

...and pathology.

Every other note in reverse chronological order for completeness.

Story tellers abound ...

- The patient and family who tell their story
- The provider who listens then retells it from their perspective.
- and of course the EHR.
 - But what of all the accumulated “chapters of the patient story” that inhabit the EHR?
 - And the untold stories that might be synthesized?
 - And the superfluous “stuff” that interfere with gleaning the most from the chart?

If you are an IS/IT administrator...

and you think having your providers navigating a complex electronic chart filing system or searching long lists of orders is O.K. ...

You are wasting their time.

Their patient's time.

Your institution's resources

If you are a physician or other provider...

and you are proud you can quickly navigate a complex electronic file-folder system or sort through reams of electronic orders... over and over again...

You are wasting your patient's time- and in many ways yours too!

“More is not always better!”

When you use this strategy what does the institution get?

- Happier patients? Providers know their story better?
- Rapid adoption of these M-pages by providers.
- Increased provider satisfaction.
- Better coding accuracy? – resolving new from existing patients
- Possibly safer patient care.
